

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
An employee received a phishing email impersonating an engineering-role applicant and downloaded/opened the password-protected attachment bfsvc.exe, which was confirmed malicious by its known malicious SHA-256 hash. The sender details are inconsistent: the email uses the name “Def Communications,” a suspicious .su sender address, and the body is signed by “Clyde West.” The subject and message also contain grammatical errors, and the attachment is a confirmed malicious file; additionally, the alert has Medium severity, which the playbook identifies as potentially requiring escalation. Therefore, the ticket should be escalated to a Level-2 SOC analyst for further investigation and response.
