

Access controls worksheet

	Note(s)	Issue(s)	Recommendation(s)
Authorization /authentication	- The incident occurred on 10/03/2023 at 8:29:57 AM. - The account used was Legal\Administrator, and the login came from the IP address 152.207.255.255. This IP address matches Robert Taylor Jr., a former contractor and legal attorney.	- Robert Taylor Jr. had administrator-level access, giving him excessive permissions. - His contract ended in 2019, but his account was still active and was used to access business systems in 2023. The account should have been disabled when his contract ended.	- Disable or remove employee and contractor accounts immediately when employment or contracts end. Regularly review active accounts to identify accounts that no longer require access. - Apply the principle of least privilege so that employees and contractors only receive the minimum level of access necessary for their job duties. - Enable multi-factor authentication (MFA)

			<i>to provide an additional layer of authentication and reduce the risk of unauthorized account access.</i>
